Art Unit: 1609

DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a composition for the diagnosis of a defect of the wnt/frz/Lrp5,6 cascade.

Group II, claim(s) 8,9, drawn to a method for identifying a binding partner for Kremen.

Group III, claim(s) 10, 11, 12, drawn to a pharmaceutical composition for inhibiting the Wnt cascade.

Group IV, claim(s) 13, 14, 15, drawn to a pharmaceutical composition comprising a compound capable of modulating the expression of a nucleic acid.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature that links the inventions [the only feature in common amongst the groups] is Kremen 1 or Kremen 2 protein and nucleic acid. Nakamura (cited in IDS: Nakamura, et al. Biochim Biophys Acta. 2001 Mar 19;1518(1-2):63-72.) teaches "We describe here our novel cloning strategy for kringle-containing proteins, the structural characteristics and the expression pattern of Kremen" (page 64, column 1, paragraph 1) (i.e. Kremen 1 nucleic acid). Nakamura also teaches "The identity of the kringle domain of Kremen to

Application/Control Number: 10/509,464 Page 3

Art Unit: 1609

other kringle-containing proteins is relatively low (approximately 30–40%) (Fig. 4A) and is highest (43%) to the kringle domain of tPA" (page 68, column 2, paragraph 1) (i.e. Kremen 1 protein).

3. Thus, the technical feature linking the recited groups I-VI does not constitute a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the prior art.

Further restriction requirement

4. Additionally, groups I-IV named above are subject to further restriction. Applicant is required for:

group I to further elect Kremen 1 or Kremen 2 or the combination.

group II to further elect Kremen 1 polypeptide or Kremen 2 polypeptide or the combination.

group III to further elect a nucleotide molecule encoding

a Kremen 1 or Kremen 2 polypeptide or the combination,

an activator/agonist of a Kremen 1 polypeptide or a Kremen 2 polypeptide or the combination

a binding partner of Kremen 1 polypeptide, or Kremen 2 polypeptide, or the combination.

group IV to further elect

a nucleic acid molecule encoding human Kremen 1 or human Kremen 2

5. This is **NOT** an election of species. The nucleic acid molecules in groups I, III, and IV encode different proteins sequences and are structurally distinct chemical

Art Unit: 1609

compounds and are unrelated to one another. Similarly, the polypeptides in group II are structurally and functionally distinct chemical compounds with distinct activities and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such protein and nucleotide sequence are presumed to represent an independent and distinct invention, subject to restriction requirement pursuant to 35 USC 121 and 37 CFR 1.141. By statute, "[i]f two or more independent and distinct inventions are claimed in one application, the Commissioner may require the application to be restricted to one of the inventions." 35 U.S.C. 121. Pursuant to this statute, the rules provide that "[i]f two or more independent and distinct inventions are claimed in a single application, the examiner in his action shall require the applicant... to elect that invention to which his claim shall be restricted." 37 CFR 1.142 (a). See also 37 CFR 1.141(a). Searching more than one of the claimed patentably distinct sequences represents a serious burden to the office.

6. The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process Application/Control Number: 10/509,464

Art Unit: 1609

claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jaime M. Greene whose telephone number is 571-270-3052. The examiner can normally be reached on Monday-Thursday, 7:30am-5:00pm, ALT. Friday, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mary Mosher can be reached on 571-272-0906. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
